WHAT IS CLAIMED IS:

- 1. A recombinant procollagen polypeptide chain comprising a natural collagen polypeptide chain, a first propeptide, and a first non-natural site-specific proteolytic agent recognition site, wherein said first non-natural site-specific proteolytic agent recognition site is located between said collagen chain and said first propeptide.
- 2. A recombinant procollagen chain according to claim 1, wherein said first non-natural site-specific proteolytic agent recognition site is a site-specific protease recognition site.
- 3. A recombinant procollagen chain according to claim 1, wherein said first non-natural site-specific proteolytic agent recognition site comprises a peptide bond labile to chemical hydrolysis.
- 4. A recombinant procollagen chain according to claim 1, wherein said first propeptide is a C-terminal propeptide.
 - 5. A recombinant procollagen chain according to claim 1, wherein said first propeptide is a natural procollagen C-terminal propeptide.
 - 6. A recombinant procollagen chain according to claim 1, further comprising a second propeptide and a second non-natural site-specific proteolytic agent recognition site, wherein said second non-natural site-specific proteolytic agent recognition site is located between said collagen chain and said second propeptide.
 - 7. A recombinant procollagen chain according to claim 6, wherein said first and said second non-natural site-specific proteolytic agent recognition sites are different.
- 8. A recombinant procollagen chain according to claim 1, further comprising a nonnatural amino acid sequence between said first site-specific proteolytic agent recognition site and said collagen chain.
 - 9. A recombinant procollagen chain according to claim 1, further comprising a non-natural amino acid sequence between said first site-specific proteolytic agent recognition site and said first propeptide.
 - 10. A nucleic acid encoding a recombinant procollagen chain according to claim 1.

- 11. A vector comprising the nucleic acid sequence of claim 10 operably linked to a transcription regulatory element not naturally linked to said nucleic acid.
- 12. A cell comprising a nucleic acid according to claim 10 operably linked to a transcription regulatory element not naturally linked to said nucleic acid.
 - 13. A recombinant collagen polypeptide chain comprising a terminal decapeptide having a non-natural amino acid sequence.
- 14. A recombinant collagen polypeptide chain produced by contacting a recombinant procollagen chain according to claim 1 with a first site-specific proteolytic agent capable of selectively cleaving said procollagen chain at said first site-specific proteolytic agent recognition site.
- 15. A collagen composition comprising a plurality of recombinant collagen chains according to claim 14, wherein said chains are polymerized.
 - 16. A sterile, nontoxic, biocompatible collagen composition comprising a recombinant collagen chain according to claim 14.
 - 17. A process for the production of a recombinant procollagen polypeptide chain, said process comprising the steps of:

culturing a cell according to claim 12 under conditions suitable for the expression of said nucleic acid; and

- recovering said recombinant procollagen chain.
 - 18. A process for the production of a recombinant collagen polypeptide chain, said process comprising the steps of:

contacting a recombinant procollagen chain according to claim 1 with a site-specific proteolytic agent capable of selectively cleaving said recombinant procollagen chain at said first site-specific proteolytic agent recognition site under conditions wherein said first site-specific proteolytic agent selectively cleaves said procollagen chain at said first site-specific proteolytic agent recognition site, whereby a collagen chain is produced; and recovering said collagen chain.

19. A method of promoting the growth of cultured cells on a solid substrate or the adherence of cultured cells to a solid substrate, said method comprising contacting said solid

substrate with a composition according to claim 16.

20. A method of augmenting localized tissue in a host, said method comprising the step of subcutaneously administering to a host a collagen composition according to claim 16.
